SAMRUDO

$SMRD

India's Global Payment Layer

Whitepaper | Version 1.0 | 2026

Powered by BharatChain — Filling the gaps UPI cannot

samrudo.com | samrudo@outlook.com

Abstract

Project status (November 2026): Samrudo is at prototype stage. The only live component is a test token on the Polygon Amoy test network, which has no monetary value. BharatChain, the UPI bridge, DeFi, tokenised assets, the INRX stablecoin, and every licence, partnership, audit and legal entity described in this paper are plans, not existing products or approvals. No token sale is underway.

Samrudo ($SMRD) is a proposed global payment blockchain for India — designed to do everything UPI does, and everything UPI cannot. Planned to run on BharatChain, a Layer-1 blockchain designed for India's scale, language diversity, and regulatory environment, Samrudo aims to bridge the ₹135 billion annual remittance gap, enable compliant decentralised finance (DeFi) for 91 million Indian crypto users, and tokenise real-world Indian assets including gold, real estate, and agricultural commodities.

The name Samrudo is coined from Samridhi (समृद्धि) — Sanskrit for prosperity and abundance. Our mission is simple: make Indian prosperity flow globally, at UPI speed, with blockchain security.

With 72.7% of Indian crypto volume going offshore due to poor INR rails, no regional language support in any existing crypto product, and zero compliant DeFi infrastructure for Indian users, Samrudo aims to fill each of these gaps.

1. Executive Summary

India is the world's largest remittance receiver ($135B+ annually), has 91 million crypto users, and operates the world's most successful instant payment system — UPI. Yet Indian crypto users are underserved at every level: no native UPI integration, no regional language wallet, no compliant DeFi, and no tokenised real-world assets.

Samrudo solves all of this in one unified blockchain ecosystem:

- Native UPI bridge — pay any UPI QR directly from your Samrudo wallet, no exchange needed
- 22 Indian languages — the first crypto wallet built for Tier 2, 3, and 4 India
- Planned FIU-IND-aligned DeFi — KYC-gated lending, staking and yield, subject to legal advice and regulatory review
- RWA tokenisation — Indian gold, real estate, and agri-commodities on-chain
- Micro-fee engine — under ₹0.01 per transaction for everyday payments
- Cross-border remittance rails — saving families up to 90% vs banks — India ↔ UAE, UK, USA, Singapore under 1% total fees

Token: $SMRD | Chain: BharatChain (own L1) | Consensus: Delegated Proof of Stake | Target users: 91M Indian crypto users + 32M Indian diaspora globally

---

2. Problem Statement

2.1 The UPI Gap

UPI revolutionised Indian domestic payments — ₹20 lakh crore processed monthly, 300+ million users, sub-3-second settlement. But UPI has hard limits:

- No cross-border support — UPI cannot send money to UK, UAE, or USA directly
- No asset investment — UPI cannot buy gold, real estate fractional ownership, or commodities
- No DeFi — UPI has no lending, staking, or yield generation capability
- No programmable money — UPI cannot execute smart contracts or conditional payments
- Controlled by NPCI — a single point of failure; blocked randomly for crypto-related transactions

2.2 The Indian Crypto Gap

Existing Indian crypto projects (Polygon, WazirX, Push Protocol, Stader Labs) are all built on foreign blockchains (Ethereum, Solana, Binance Chain) with no India-native context:

- 72.7% of Indian crypto trading volume goes offshore due to poor INR on/off ramps
- Zero wallets support Hindi, Tamil, Telugu, Marathi, Bengali, or any regional language
- No FIU-IND compliant DeFi product exists for Indian users

- No Indian blockchain has tokenised gold, real estate, or agricultural commodities
- 30% TDS on crypto gains + poor exchange infrastructure drives users underground

2.3 The Remittance Gap

India receives $135 billion in annual remittances — the world's largest. Current remittance channels charge 4–8% fees and take 1–5 business days. Samrudo targets this with under 1% total fees and instant settlement — saving Indian families ₹50,000–₹2,00,000 per year in transfer costs alone.

---

3. Market Opportunity

India crypto users (2026)	91 million
India crypto market revenue (2026)	$9.1 billion
India annual remittance inflow	$135 billion
Indian diaspora globally	32 million
India real estate market	$3.8 trillion
India gold holdings (world's largest)	~25,000 tonnes
UPI monthly transaction volume	₹20 lakh crore
Crypto SIP adoption growth (2025)	+623% YoY
Global tokenisation market (2030)	$30 trillion

Samrudo's total addressable market across cross-border payments, compliant DeFi, and RWA tokenisation in India exceeds $500 billion by 2030.

---

4. Solution — Samrudo & BharatChain

4.1 BharatChain — India's First Native L1

BharatChain is the underlying Layer-1 blockchain powering Samrudo. Unlike existing Indian crypto projects that rely on Ethereum or Solana, BharatChain is purpose-built for India:

- Consensus: Delegated Proof of Stake (DPoS) — 21 elected validator nodes, energy efficient
- Block time: 1.5 seconds — matching UPI's near-instant settlement experience
- Throughput: 10,000+ TPS — handles India's payment scale
- Fee structure: micro-fee engine targeting under ₹0.01 per transaction
- EVM compatible — existing Ethereum dApps can deploy on BharatChain with zero code changes
- INRX, a proposed INR-backed stablecoin — under evaluation, because India has no stablecoin framework and issuance would need a licensed partner

4.2 Samrudo Token ($SMRD)

$SMRD is the native utility and governance token of BharatChain. It powers all transaction fees, staking rewards, governance voting, and RWA tokenisation on the network.

---

5. Core Features

5.1 Native UPI Bridge

Planned: a wallet user would scan a UPI QR code and pay from their crypto balance, with conversion to INR handled by a licensed payment partner. This depends on regulatory approval and partner agreements. No part of this flow is built yet.

5.2 22 Indian Language Support

Samrudo Wallet is available in all 22 scheduled Indian languages — Hindi, Tamil, Telugu, Marathi, Bengali, Gujarati, Kannada, Malayalam, Punjabi, Odia, and 12 more. This is the first crypto product built for Bharat, not just urban India.

5.3 Planned FIU-IND-Aligned DeFi

Samrudo's planned DeFi layer would use a permissioned pool design in which KYC-verified users access lending, staking and yield products, with the aim of meeting FIU-IND (Financial Intelligence Unit India) reporting requirements. India has no dedicated crypto law, so this design must be reviewed by legal counsel before launch.

- Lending pools: borrow INRX against $SMRD, BTC, or ETH collateral
- Staking: earn 8–15% APY by staking $SMRD and validating BharatChain
- Yield farming: provide liquidity to INRX/SMRD pools and earn rewards
- SIP mode: automated weekly/monthly crypto investments like a mutual fund

5.4 RWA Tokenisation

Samrudo's Real World Asset layer brings India's largest asset classes onto BharatChain:

- Digital Gold (DGLD): proposed gold-backed token, with 1 DGLD intended to equal 1 gram of independently audited gold; custody and legal structure to be determined
- Fractional Real Estate (REIT tokens): own ₹100 worth of Mumbai commercial property
- Agri tokens: invest in wheat, rice, and cotton futures backed by NCDEX contracts

5.5 Cross-Border Remittance Rails

Planned: users would send money from the UAE, UK, USA or Singapore to an Indian UPI address in about 30 seconds for around 1% or less in total fees, compared with 4–8% via banks, SWIFT or

informal networks. These are design targets, not measured results. The plan is to work with licensed money transfer operators in each corridor; no such partnership exists yet.

5.6 Freelancer Earn + Spend

Planned: freelancers would be able to receive USD or USDT from global clients into a Samrudo wallet, convert to INR, and spend via UPI, with income reports to help with ITR filing. This depends on licensed conversion partners and is not yet built.

---

6. Technology Architecture

6.1 Consensus Mechanism

BharatChain uses Delegated Proof of Stake (DPoS) with 21 elected validator nodes. Token holders stake $SMRD to vote for validators. Validators earn block rewards + transaction fees. Minimum validator stake: 1,00,000 $SMRD. Slashing conditions: double-signing, downtime > 12 hours.

6.2 Smart Contract Layer

BharatChain is EVM-compatible — Solidity smart contracts deploy without modification. The native smart contract VM also supports CosmWasm for interoperability with Cosmos-based chains (IBC protocol). This enables Samrudo to bridge assets with Cosmos, Ethereum, and BNB Chain natively.

6.3 UPI Bridge Architecture

The planned UPI bridge would work through a licensed Payment Aggregator partnership under RBI's payment regulations; no partner has been engaged yet. Intended flow: user scans a UPI QR code → the app reads the payee address → tokens are locked in an escrow smart contract → the partner converts to INR → a UPI payment is sent to the merchant → confirmation in about 30 seconds (target).

6.4 Security Model

Security plan: before any mainnet launch, BharatChain's core contracts would undergo an independent third-party security audit, supported by a bug bounty programme, a multi-signature security council for emergency pauses, and regular penetration testing. Validator keys would use hardware security modules. None of these are in place yet; the prototype token is on a test network only.

---

7. Tokenomics

7.1 Token Supply

Token name	Samrudo
Ticker symbol	$SMRD
Total supply	1,000,000,000 (1 billion) $SMRD — fixed
Blockchain	BharatChain (own L1)
Token standard	Native BharatChain + ERC-20 bridge
Decimals	18

7.2 Token Distribution

Community & ecosystem	35% — 350M SMRD
Founders & team	15% — 150M SMRD (4-year vesting, 1-year cliff)
Investors & advisors	12% — 120M SMRD (2-year vesting)
Reserve fund	15% — 150M SMRD (multisig controlled)
Liquidity provisioning	10% — 100M SMRD (DEX + CEX liquidity)
Staking rewards (10 years)	10% — 100M SMRD (released over 10 years)
Public sale / IDO	3% — 30M SMRD

7.3 Token Utility

- Transaction fees: all BharatChain gas fees paid in $SMRD (or INRX with 10% premium)
- Staking: stake $SMRD to earn block rewards + validator selection rights
- Governance: 1 $SMRD = 1 vote on protocol upgrades, fee parameters, RWA listings
- DeFi collateral: use $SMRD as collateral to borrow INRX in Samrudo lending pools
- RWA access: $SMRD required to participate in tokenised gold/real estate/agri launches
- Fee discounts: holding 1,000+ $SMRD gives 50% fee discount on UPI bridge transactions

7.4 Burn Mechanism

20% of all UPI bridge fees are permanently burned — reducing $SMRD supply over time. At projected Year 3 volumes (₹1,000 crore daily), this burns approximately 2.4 million $SMRD per year, creating deflationary pressure aligned with network growth.

---

8. Regulatory Strategy

8.1 India

Samrudo intends to design for India's regulatory framework from the start. The measures below are planned, none are in place yet, and all are subject to legal advice:

- FIU-IND registration as a Virtual Digital Asset Service Provider (VASP), if and when services that require it are offered
- KYC/AML processes, for example Aadhaar-based eKYC and PAN verification, run through licensed providers
- Tax-reporting support (30% tax and 1% TDS on VDA transfers) to help users with ITR filing
- UPI bridge to operate only through an RBI-authorised Payment Aggregator partner
- RWA token structures to be reviewed against SEBI rules before any launch

8.2 International Jurisdictions

No legal entity has been formed yet. The plan is to form a company, possibly in Singapore, once funding allows. Remittance corridors would work through licensed partners in each region (for example the UAE, UK and USA), subject to each partner's authorisation. Jurisdiction and structure will be decided with legal counsel.

---

9. Go-to-Market Strategy

Phase 1 — Bharat First (Month 1–9)

Launch in Tier 2 and 3 Indian cities first — not Mumbai and Bangalore. Target: auto-drivers, small traders, freelancers, and gig workers who use UPI daily but have no access to crypto. Partner with regional language YouTubers (Hindi, Tamil, Telugu) for community building. Target: 1 lakh wallets in 6 months.

Phase 2 — Diaspora Corridor (Month 9–18)

Launch remittance product for Indian diaspora in UAE, UK, and USA. Partner with Indian community associations, cricket clubs, and regional associations. Target: 10,000 active monthly remittance users generating real volume by Month 18.

Phase 3 — DeFi & RWA (Month 18–30)

Launch compliant DeFi products — lending, staking, SIP mode — and the first RWA tokenisation (Digital Gold). Partner with NBFC for lending regulatory cover. Target: ₹100 crore TVL (Total Value Locked) by Month 30.

Phase 4 — Global Exchange Listings (Month 30–36)

Apply for KuCoin, Bybit, and Gate.io listings based on proven traction. Apply for Binance and Coinbase based on community size, volume, and compliance track record. Target: Top 500 CoinMarketCap ranking by Month 36.

---

10. Roadmap

Q3 2026	Domain registered (samrudo.com); trademark application with IP India planned for December 2026; team formation; whitepaper release
Q4 2026	Prototype token and web portal on a test network, smart contract development, independent security audit (subject to funding), seed funding raise
Q1 2027	BharatChain mainnet launch, Samrudo Wallet beta (Hindi + English), DEX listing (Uniswap/PancakeSwap)
Q2 2027	UPI bridge v1 launch, 22-language wallet, CoinDCX + WazirX listing, 1 lakh wallet target
Q3 2027	Planned: UAE remittance corridor with a licensed partner, FIU-IND registration if required, DeFi lending pool v1
Q4 2027	UK + USA remittance corridors, Digital Gold (DGLD) launch, KuCoin listing application
Q1 2028	Fractional real estate tokens, SIP mode launch, 10 lakh wallets, Bybit listing
Q2 2028	Agri commodity tokens, governance DAO launch, Binance/Coinbase application

11. Team Structure Needed

Samrudo requires the following team to execute this vision:

CEO / Founder	Vision, fundraising, regulatory relationships, exchange BD
CTO	BharatChain architecture, smart contracts, security model
Blockchain Engineers (3)	Core chain development, EVM compatibility, bridge contracts
Mobile Developer (2)	iOS + Android Samrudo Wallet, 22-language support
Legal Counsel	India (FIU-IND, SEBI, RBI) + Singapore + UAE compliance
Head of Growth	Community, marketing, influencer partnerships, Tier 2/3 India
DeFi Product Lead	Lending pools, staking, SIP mode, RWA structuring
Compliance Officer	KYC/AML, TDS reporting, FIU-IND reporting

12. Risk Factors

- Regulatory risk: India has no dedicated crypto law, and RBI or SEBI may impose restrictions; the EU (MiCA), the US and other regions have their own rules. Mitigation: legal advice before any token sale or handling of user funds, and registration where required.
- Technical risk: smart contract or protocol vulnerabilities could cause loss of funds. Mitigation (planned): independent audit, bug bounty and a multi-signature security council before mainnet.
- Competition risk: existing exchanges (WazirX, CoinDCX) may copy features. Mitigation: speed of execution, focus on one corridor first, and partnerships. No patent has been filed.

- Liquidity risk: insufficient DEX liquidity at launch — mitigated by 10% token allocation to liquidity provisioning
- Adoption risk: Indian users may be slow to adopt — mitigated by regional language support and Tier 2/3 city focus
- Market risk: crypto market downturn — mitigated by real utility (UPI bridge, remittances) not purely speculative value

---

13. Legal Disclaimer

This whitepaper is for informational purposes only. It is not financial, investment or legal advice, and it is not an offer to sell or a solicitation to buy any token or security. The $SMRD token on the Polygon Amoy test network has no monetary value, and its legal classification has not been determined and may differ between jurisdictions. Crypto-assets carry a high risk, including total loss. Statements about future features, partnerships, licences, audits and dates are plans and may change. Readers should take independent legal and financial advice.
